

 **SPOTAP** SERVICES ON THE GO

USE CASES

The SPOTAP supports travellers before and during their journey. Travelers who use the app have everything in their pocket for good risk provisioning. The most important functions for you are:

- Access to country information for the destinations before your departure, which will enable you to prepare your trip well.
- Immediate crisis or medical help is available for you with one click.
- You have access to real-time risk information about your current location or a future destination.
- You can retrieve contact information for medical centres near your current location with phone numbers and location information on a map.
- If you feel insecure in a travel destination, GPS tracking can be activated. This enables risk managers to accompany you.
- Depending on the contracted services, you can access more services on the go that make travelling more convenient.

REQUIREMENTS

The SPOTAP works best on modern smartphones with display sizes from 5" and larger and the latest versions of their operating systems.

The minimum system requirements are a mobile phone with iOS version 11 or newer and Android version 6 or higher.
